

# MODEL SB1 SERIES

- SWITCH BOX
- BEAM WIDTH CONTROL
- STANDARD IMPEDANCE MATCHING

SB1 SERIES units are used to switch between modes of a transducer, primarily between narrow beam width and wide beam widths on applicable transducers. As standard, they come with cable glands, though the glands can be replaced with connectors on request.

## MECHANICAL SPECIFICATION

All dimensions in mm

## TECHNICAL SPECIFICATION

Standard Impedance-Match	50Ω, 75Ω, 100Ω
Power Supply (Input)	Not Required
Input	Cable Gland (Other Options available)
